Java introduction to syntax

Programming assignment

1. Initialise an array of strings with all classes that You take at the Cracow University of Technology
2. Iterate over the array with for and for-each loop printing out the classes.

Write java application that:

3. Define a class **Student** with field *firstName*, *lastName*, *nationality* and methods *setFirstName*, *getFirstName*, *setLastName*, *getLastName*, *setNationality*, *getNationality* and method "printStudnet()" . Class should be initialised with constructor
4. Define a function called *printStudnets* that take an arbitrary number of arguments of type **Student** and call method *printStudnet()* on them
5. Call a method printStudents with different number of arguments.
